

Business Intelligence Project

Goal:

Create an interactive report for the general performance of a toy company. Present the data in a visually appealing and in an easy to navigate way.

Data:

Data for several years of sales, customers and suppliers is available.

Tasks:

1. Load the data sources

2. Power Query

- ✓ Remove “_” from column “SupplierReference” (table “Purchasing Supplier”)
- ✓ Trim column “ColorName” (table “Warehouse Color”)

3. Create Data Model

Build a dimensional star schema model. You will need a date dimension – create one as a calculated table.

4. Outline and describe the level of granularity for every table used in a different file, e.g, Excel, Word, etc.

5. Main KPIs to be presented

- ✓ Unique order count
- ✓ Average order amount in £
- ✓ YTD, MTD sales – all and separated by categories (Online Sales Conditional)
- ✓ YOY Sales
- ✓ Online sales as a percentage of overall sales
- ✓ TOP Customers by numbers of orders and turnover
- ✓ Quantity and Sales by Supplier Name and Supplier Category Name
- ✓ Quantity and Sales by Category Names
- ✓ Quantity and Sales by Package Types
